

CS578: Project Sinusoidal Model

Complete Observations Report

Students: CSD5111 Eirini Griniezaki - CSD5136 Alexandros Manos

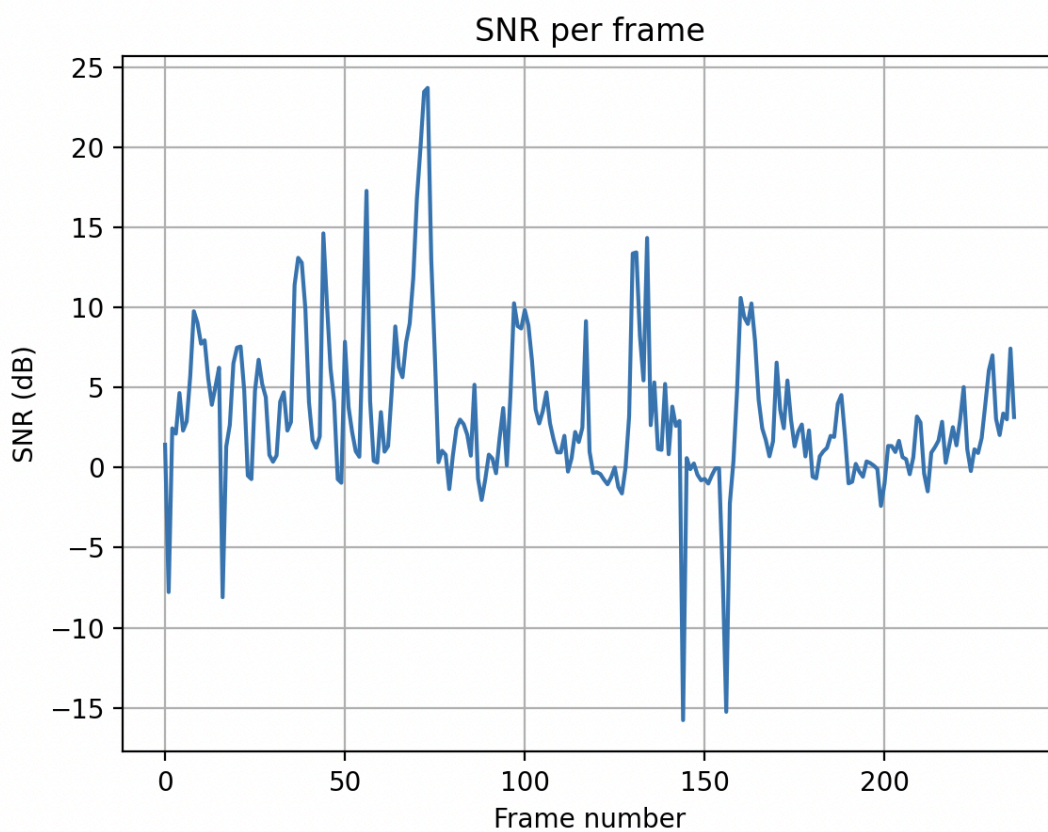

Course: HY578 - Digital Speech Signal Processing

Date: 3 November 2025

The synthesized speech signal using the sinusoidal model demonstrates medium to high perceptual quality with an MSE of approximately 0.006789.

The synthesized output successfully preserves the natural speech characteristics and the structure of the original signal. However, a moderate amount of background noise is perceivable throughout the reconstructed waveform and unvoiced sounds and silences show SNR dips.

SNR plot for arctic_bdl1_snd_norm.wav
